FINTIN V1

Solving the problems of digital accessibility and real-time communication for the visually impaired

285 million people who are visually impaired and their digital accessibility

Many visually impaired people around the world use smartphones, but still have difficulty accessing digital information. FINTIN V1 provides a solution that improves digital information accessibility and real-time communication for the visually impaired.

Innovative Structured Mini QWERTY

FINTIN V1 is a communicator optimized for the visually impaired, featuring 'Structured Mini QWERTY' technology. This technology allows for the input of up to 36 QWERTY keys using just 6 keys.

Each key is designed for tactile recognition, allowing visually impaired individuals to access digital information anytime, anywhere, without the need to visually locate the keys.

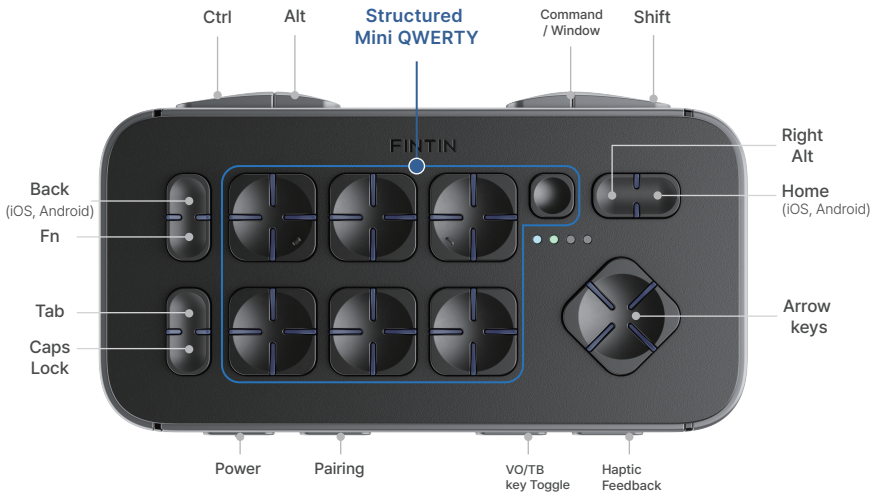

Optimized functions for the visually impaired

It is designed to make it easier for the visually impaired to use the smartphone by supporting a toggle button for screen reader, for VoiceOver and TalkBack, as well.

Independent Digital Life

FINTIN V1 not only supports real-time communication and content use, but also helps visually impaired people lead independent daily lives. As a result, visually impaired people can have opportunities to expand and become active in various fields, such as collaborating and creating with non-disabled people.
