for Game Controllers/P55 DualSense

ONECOM

Communicate With Everyone

FINTIN XPANDER

Now completely overcome the difficulties of real-time communication and console games, and now enjoy the joy of real-time chat.

Structured Mini QWERTY technology

FINTIN is a next-generation input device that applies 'Structured Mini QWERTY' technology that can input up to 36 QWERTY keys with only 6 keys. It can be pressed accurately using only the sense of touch within a small and simple module, enabling fast and accurate communication while maintaining visual immersion in various digital environments such as consoles or XR.

Improved user typing experience in digital environments

Xpander supports users with an improved typing UX in the next-generation digital environment, providing not only voice but also a variety of communication experiences such as messaging, posting, and search.

Tactile-based and fast input technology: Typing without disrupting visual immersion

Each key of FINTIN is designed so that the user can tactily recognize it without having to look at the keyboard. This design allows game players to be fully immersed in the game. This provides new enjoyment and experiences in real-time communication between players that were previously difficult for them to experience.

Functions and specifications

• Size and weight
